Thanks everyone for your help.

If you wanted to create a GIF, JPG, etc of some data you have plotted,  
it is still possible to export this out of IDL to use in word / power  
point for a presentation?

I do not need (as of now) the ability to create MPEG videos, etc.

I also read something about the arrays size you can work with is  
limited in the student version. Any truth to this?

Thanks  
bas
