Hi IDL'ers,

I'm trying to add axis names to an iPlot using a string created with TextToIDL :

```
string = textoidl("\mumol m^{-2} s^{-1}')
```

For example, if I do it with the traditional PLOT command (e.g., plot, x,y, xtitle=string), it works great. But when I do it with iPlot (e.g., iplot, x,y, xtitle=string), it doesn't show right. The 'mu' symbol is replaced by some kind of capital 'i' symbol but the superscript show alright.

Is there a way to bypass this problem? I have IDL version 6.1.

Thanks!
