Profiler.. Brilliant!

So, now I know.. 76% of the time is taken up by transposing arrays, and summing results. I suppose I'll have a look and see whether I can transpose data outside the loops.

RE David:

Unfortunately: I am now using the routine in some actual data analysis.

So I need the output, and this programm will need to be run on 40 datasets, which would now take a month to run: Optimizing is a must.

Profiling seems to help me focus on the problem area!

RE: Mark Hadfield:

I am so sorry! I'll try to maintain a low-profile on the forum, and be non-intrusive. I must admit.. My opinion on T-Shirts does not include IDL shirts. I'd reckon they should give all users a free TShirts, considering the price they charge for simple licences. Maybe thinkgeek.com can produce a batch of them? Else..

<http://www.thinkgeek.com/tshirts/oreillyshirts/605c/>

Anyway.. You've pushed me in the right direction, I am sure,

Thanks!

Jelle.
