I've been running IDL 6.2 on Fedora Core 4 without any problems. I haven't found any specific differences between Fedora and RHEL when it comes to running IDL. And considering that I have things running on Fedora Core 4 (released summer 2005), a similar setup should run just fine under RHEL 4 (released February 2005). And for what it's worth I'm running the 2.6.14 kernel.
