Subject: Debug Posted by ChiChiRuiz@gmail.com on Thu, 08 Dec 2005 18:28:52 GMT View Forum Message <> Reply to Message

Hi,

I've been using a procedure for analysing image data (develped in house). However, when I run the procedure, sometimes I get the message:

Program caused arithmetic error: Floating divide by 0 Program caused arithmetic error: Floating illegal operand

but sometimes I don't. What is a good way to debug in this situation where I have no idea what's causing "dividing by 0"? Any comment is appreciated! Thanks.
