Hi, I'm using MPFIT and MPFITFUN from Craig Markwardt.

I have one parameter which can be -1 or 1, nothing else, but I'm having problems to do this with PARINFO.

Probably there is an easier way to do it but I am setting limits=[-1,1], then I set the min and the max step to 2. I thought that this would do keep this parameter in -1 or in 1, but I get values like 0.8 or 0.9. Any ideas?

thanks

luxx
