
Subject: Too many structure tags ?

Hi,

This is (hopefully) a simple problem. I'm running IDL and I keep getting an error message:

"Too many parameters or structure tags defined"

when I try to compile a simple program which contains a fairly big structure. I've tried to resize the code and data areas using the ".SIZE" command to the max allowed (65000 bytes each), but the error doesn't go away. What is strange is, I can successfully compile and run the same program on a friend's copy of PV-WAVE with much smaller code and data areas (32k and 8k respectively). I'll appreciate any helpful suggestions.

Thanks,

Devesh Raj
