Yes, some quiet improvements.

The structures nowadays (at least till 6.0) only need the same patterns, even the tag names can differ (the one of the first struct are taken):

```
IDL> s={n:'s',i:1}
```

```
IDL> t={t:",ii:2}
```

```
IDL> help,/STRUCT,[s,t]
```

```
** Structure <92b911c>, 2 tags, length=16, data length=14, refs=2:
```

```
  N          STRING  's'
```

```
  I          INT      1
```

```
IDL> help,/STRUCT,[t,s]
```

```
** Structure <92b9224>, 2 tags, length=16, data length=14, refs=2:
```

```
  T          STRING  "
```

```
  II         INT      2
```

Ah, did I mention that GDL behaves the same way :-)
