Subject: IDL routine to compute and plot particle trajectory given series of velocity fields

Dear all,

Some time ago, I found on the internet an IDL routine which computes and
  plots the trajectory of some particles given a time series of
horizontal velocity field (U, V).

Unfortunately, I do not remember the name of the routine nor the address
where I found it.

I would appreciate if somebody could point me where to find the routine.

Thanks in advance,

Andry
