Tech-X Corporation is accepting applications for an IDL developer in our Boulder office. Tech-X specializes in computational science, aimed at understanding physics via modern modeling techniques, advanced visualization, collaboration tools, and distributed computing technologies. The successful candidate should be proficient with the IDL product from Research Systems, both in the use of IDL and in interfacing IDL to other languages. The primary development environment will be Linux and Mac OS X. Experience in scripting languages, network programming, parallel computing and scientific data analysis would be a plus. See http://www.txcorp.com for more detailed information.

Tech-X offers a competitive salary and benefits package. The closing date for applications will be February 28, 2006.

We are accepting applications via on-line submission only, at http://www.txcorp.com/corporation/Jobs/applicationForm.php.
