The following looks very odd. Have any clues?

```
IDL> y = fltarr(1008879)+35
```

```
IDL> id = where(y ne 35, cc)
```

```
IDL> print, cc
```

```
0
```

```
; so y is strictly 35.0 BUT
```

```
IDL> print, mean(y)
```

```
35.5249
```

```
IDL> print, mean(y(0:400000))
```

```
35.0000
```

Thanks,
