David pointed out an error in my LIMIT definition, i.e.

```
limit=[46.13, -89.37, 41.52, -84.42]
```

which should be

```
limit=[41.52, -89.37, 46.13, -84.42]
```

If you look at the source code for MAP_PROJ_INIT, it checks the ordering of latmin and latmax, and actually switches them if latmin > latmax. So that explains why the LIMIT keyword was interpreted correctly in the original code.
