I need to draw 7 ROIs on each of a series of images. I draw the set of
7 on the first image and with REGIONS_OUT and REGIONS_IN, I save the
ROIs for use on the next image in the series. Due to movement between
the consecutive images, I need to move the whole set of ROIs as a set
(not one buy one, which is less accurate and very time consuming). Is
there a way to do this with XROI?
