Hi guys,

I don't usually promote updates for my software, but I have been made aware of a serious problem with the interface of my GEOPACK DLM with the T96 external magnetic field model. It turns out that the T04S model was also affected, but others were not.

The bugs have been fixed in versions 3.3 and above of the DLM, and updates have been provided to the RSI code contrib site and also have been uploaded to http://dysprosium.jhuapl.edu/idl_geopack.

Let me be clear: This is not a bug in the models, only of my DLM interface. If you are using T96 or T04S from MY DLM you NEED this update or your results will be wrong!

Cheers,
Haje
