hi Peter..

Thanx for the Suggestion...

I have Read the File(With data) and also i have brought the Data to my Program...

I have now the Image as 3D ... and NOW i am working on to get the Image into 2D ...

the Method i am trying to is Just as the same u have Suggested...

I am Considering only a Small part of the Whole Image and from where i can get the Required attributes...

but when i consider the Small part...i think it is really hard for me to spot it as a 2D ...

How can i proceed further??
