Hi, Rick

Thanks for your kind reply. I think the problem is that the library which I used (DirectX.Capture.dll) is COM object, but it is not an ActiveX library. It is a .NET library. In .NET framework, you do not need to (or simply you can't) register the .NET library. This function is used to simplify coding within the .NET framework, such as C#. However, for us, the IDL user, we can't use ActiveX control to access this kind of library any more since we can't get the CLSID.

BTW, do you have any library or do you know where I can find some library to control a web cam from IDL? Thanks a lot.
