I use the following code to read in an interleave (by pixel) raster image.  
This works, but how would I make it more effecient by removing the FOR DO  
BEGIN?

Kelly Dean  
CSU/CIRA

=====sample===== ======

nx = 392  
ny = 350  
prefix = 80  
nchan = 7

IIImage = BYTarr(nchan,nx,ny)  
TEMP = BYTarr(prefix+nx\*nchan)

FOR j = 1,ny DO BEGIN  
READU, unit, TEMP  
nxl = nx\*nchan+prefix-1  
TTemp = TEMP(prefix:nxl)  
IIImage(\*,\*,ny-j) = TTEMP  
ENDFOR
