Subject: Plot setting in order to get the graphs similar to SuperMongo outputs
Posted by snfinder@naver.com on Sat, 04 Mar 2006 01:54:30 GMT

Hi IDLers,

I have seen many graphs on papers.
I think 2D ordinary simple graph of SM is better than ps outputs of
IDL.
How can I adjust various plot setting(customization) to obtain one
similar to output of SM?
Show me the result figure if you don't mind.

GL,
YJP
