Subject: CGM /NCAR encoding bug?

Dear All,

 O.K. I give up. Every second time that I

 set_plot,'cgm'

then set

 device,/ncar,filename='something.cgm'

the file channel allocation seems to interfere with something
else. A help,/files reorts that channel 100 has been taken for
the device output. Whenever I try to 'loadct' a colour palette
or if I try to do a 'restore' it falls over. Not with any other
graphics file devices though.

 Any ideas please?

 Iarla.
