Reading some recent posts about IDL limits, here is a list off the top of my head. Please post any additions or corrections.

IDL limits:

|                              |                |
|------------------------------|----------------|
| local variables              | <236 (?)       |
| common block variables       | <64            |
| pro/function parameters      | <64            |
| CALL_EXTERNAL parameters     | <64            |
| structure tags               | <126 (?)       |
| variables (v3.5.1 & earlier) | <16 characters |
| pro/func names               | (?)            |
