Hello,

Is there a way to "pad" the distance between plots in !p.multi? I have an issue with the right hand side of one of my graph's y-axis (which has an axis label) running into the left hand side of the adjacent plots left hand side y-axis label. I tried using the position keyword in plot; however since I'm plotting within a loop it overlaid all the plots on one another overriding the !p.multi command. Any suggestions?

Thanks!

Jon
