Subject: CW_BGROUP question

Hello,

A simple one - how does one de-sensitise a button group (i.e. all the buttons) created via CW_BGROUP? Do you have to sensitise each individual button? I tried desensitising the id returned from the CW_BGROUP call, as well as the base in which the BGroup resides - but no luck. All the buttons are still sensitive and responding to events.

Thanks for any info.
