Pick your poison...

```
IDL> print, strjoin(trim(indgen(5),2))  
01234  
IDL> print, indgen(5), format = '(5I1)'  
01234  
IDL> print, strcompress(strjoin(indgen(5)),/remove_all)  
01234  
IDL> print, string(indgen(5), format = '(5I1)')  
01234
```

I'm sure there are other means, too.
