Pick your poison...

```
IDL> print, strjoin(strtrim(indgen(5),2))
01234
IDL> print, indgen(5), format = '(5I1)'
01234
IDL> print, strcompress(strjoin(indgen(5)),/remove_all)
01234
IDL> print, string(indgen(5), format = '(5I1)')
01234
```

I'm sure there are other means, too.
