Hi Wolf,

I tried this already and no luck.. it's the same situation.. ItThe script not found error.. I guess I have no option other than check the install scripts and see where the error is coming from.. I tried grepping the error message from the couple of scripts provided with the CD, i.e; the xinstall.sh and the ones inside the install directory:

i.e;

```
cat unpack.sh|grep post_unpack
```

and nothing turned up. Anyways, I am at a loss. My mind is not in this, but on the work I need to do before my research meeting. But I guess I have no other option but to dig deeper.

I appreciate you taking time off to reply.

Raj
