Hi, IDLers~

I want to know the algorithm which is used in sort and where.  
How much fast is that functions comparing with C and Fortran functions  
if there are similar functions in C and Fortran even if I don't know  
that language at all.

The reason which I ask is that I need more faster sorting and finding  
method in IDL.

Is there anyone to give a tip for me?

Thank you~  
Good day~
