I noticed in reading this article again that it had gotten pretty long in the tooth. I've made a couple of updates to allow it to work with modern computers, and while I was at it, I added a section on putting a 3D scatter plot on top of a map projection. This was \*slightly\* more complicated than I expected it to be for reasons that completely mystify me, although I'm satisfied that Map\_Set is doing the damage. Anyway, the problem was pretty easy to work around.
