Subject: New MacX crashes IDL?
Posted by Bill Moninger on Tue, 08 Aug 1995 07:00:00 GMT

Version 1.2 of MacX has the well-known property of crashing its (macintosh)
host when it runs the Unix version of IDL. This week Apple will release a new
version of MacX which has been in beta for several months.

Does anyone know whether the new version of MacX will work with IDL?
