Thanks!

HELP, /LIB will list all system routines with available parameters.  
RETAIN for DEVICE is not allowed yet, but it is on my todo list.

time\_test needs write permission to the current directory. You can move  
around with CD, 'dir' (read the working dir with CD, CURR=curr & PRINT,  
curr). Search path is the normal !PATH. The start up file name can be  
given in the FL\_STARTUP env. variable.

So you can run time\_test by

```
CD, 'some_dir_with_write_permission'  
!PATH+=':/usr/local/rsi/idl/lib'  
TIME_TEST3
```

regards,  
lajos
