Ah, I understand.

I don't see anything wrong with your projection calls. However, I believe your polyline needs to be a [2,n] array, not a [1,n] as is shown in your example.

```
polyline = [ $  
  [-106.904,  41.5887], $  
  [-106.821,  42.2302], $  
  [-106.013,  42.2183], $  
  .....
```

With this change, it works for me.
