Hi, David...

I have an ENVI license. That is not the problem. The problem is that the way this routines are being called, IDL complains that there are some syntax errors, e.g the equal signs (projection=proj) :

```
evf_ptr = envi_evf_define_init('sample.evf', $  
    projection=proj, data_type=4, $  
    layer_name='Sample EVF File')
```

I was wondering what I should do to make this PRO example to work with IDL.

Thanks
