
Subject: ION script drop-down

ION script offers replacements for html check-boxes and radio-buttons with the characteristic that they retain their state on page reloading. But not, for example, for a drop-down. I'm wondering whether this is because there's a trivial way to do that programmatically (I know very little about html - I'm learning it through ION script...), or it's just tough luck.

This is what the html looks like - I'd like to keep the 'selected' in the right place. I could, of course, write some IDL to generate the code, I suppose...

Zoom:

```
<select name="zoom" size="1">  
<option>4x  
<option>2x  
<option>1x  
<option>1/2  
<option>1/3  
<option selected>1/4  
<option>1/6  
<option>1/8  
<option>1/11  
<option>1/16  
</select>
```

thanks for any ideas,
Greg
