This is exactly the reason why I never adopted the new DLM version. Little changes in the API and DLMs simply won't work anymore. I had to recompile all my DLMs for use with IDL 6.3 beta back then. I hope Oleg will provide an updated version. If not, someone (if it has to be me I will) can supply a recompiled version of the old source. However, this is just a temporary solution. In the long run, RSI really needs to support AVIs in IDL. I have been trying to push for that but if you want this to happen, they will need your input as well!

Cheers,
Haje
