Hi Peter,

I am running this program on IDL_6.0 on Linux machine and it gives me error on the following location. IDL does not recognize indgen_array.

```
glon = indgen_array(nlon, nlat, /lon) * dlon + lon0[0] + dlon / 2.  
glat = indgen_array(nlon, nlat, /lat) * dlat + lat0[0] + dlat / 2.
```

I was wondering is this just indgen or some other thing you want to do here ?

```
glon = indgen(nlon, nlat) * dlon + lon0[0] + dlon / 2.  
glat = indgen(nlon, nlat) * dlat + lat0[0] + dlat / 2.
```

Thanks,
Pawan
