Hello to everybody !

It's nice to see that initial IdlAvi and derived DLM are so useful for IDL users. Some time ago I uploaded it on RSI site (User Contributed -> Top downloads), nothing is changed except source code is available (it was before I found the post about IDL 6.3 problems) I have not tested it with IDL 6.3, but I think it should work after compilation. I can make DLM for some extra money also. If you think this program is very useful for you and would like to financially support it please don't hesitate to write me.

Best regards,

Oleg
