I am new bee to IDL

I have a data set look like

1 Cu1	0.0000	0.0000	0.0000 Cu
2 C2	2.9885	0.0000	0.0000 C
3 C3	4.1317	0.9085	0.0000 C
4 C4	5.5122	0.6840	0.0000 C
5 C5	6.3503	1.8016	-0.0000 C
6 C6	2.1513	2.0744	0.0000 C
7 C7	0.0000	-2.9885	-0.0000 C
8 C8	-0.0000	2.9885	0.0000 C
9 C9	-2.1513	-2.0744	0.0000 C
10 C10	-2.9885	0.0000	0.0000 C
11 C11	-2.0744	2.1513	0.0000 C
12 C12	2.0744	-2.1513	-0.0000 C
13 C13	3.6048	2.2140	0.0000 C
14 C14	0.9085	-4.1317	-0.0000 C
15 C15	-0.9085	4.1317	0.0000 C

.....

.....

Can some one tell me how to write IDL code to read this data in a formatted way?

Thanks,

Nalaka
