By the way, I still like XCD for this purpose on Windows machines:

<http://www.dfanning.com/programs/xcd.zip>

It's too bad we don't have a machine-portable solution. Maybe the new RSI (ITTVIS) would be amenable to offering a free T-Shirt to someone who solved this particular problem.

In fact, a Best IDL Utility programming contest, with T-shirts to the top 10 winners might even solve a clear marketing problem and get the word out about the name change. I'll suggest it to them. :-)

Cheers,

David
