Thank you Graig for the response and the fitting routines of course!
It works fine now.

I would like to ask you how MPFITFUN handles the case when both parinfo
and start_parms are set. Does start_parms take precedent over parinfo?
What happens in the case that start_parms and parinfo are in conflict?
For example if start_parms=[2,1] and parinfo(1).limited(0)=1,
parinfo(1).limits(0)=2.

Thank you again,
JJM
