Hi Kyle,

plothist essentially wraps plot for graphics output. You can pass on graphics keywords to plot, e.g.

```
a=randomn(seed,200)
```

```
plothist,a,/autobin
```

```
... major ticks (with label) on even values
```

```
plothist,a,/autobin,xtickinterval=1
```

```
.. probably what you want
```

Cheers,

Jo
