Hello,
I've the following question: if I have a project written in IDL 6.2 but
which only uses IDL 6.0 routines and no routines or functionality of
versions later than IDL 6.0, can I make a .sav file by

SAVE, /ROUTINES

which can be run under IDL 6.0 ?
Or IDL 6.2 is necessary even if no new routines are used?

Thanks a lot!
Cheers
Gianluca
