Subject: New version of my AVI reader/writer

Hello Everyone,

With the advent of IDL 6.3 my old AVI routines stopped working. Rather
than trying to rework the old code I decided to start fresh. This new
dll has several new features that will be of use to the IDL community.
The new codec keyword allows you specify the compression codec
directly. If this keyword is undefined then the user chosen value will
be passed back to the IDL code. This dll will also work with the
avisynth frameserver (www.avisynth.org) allowing IDL to read/write MPEG
and Quicktime files. For quictktime you will also need to install
quicktimealternative at http://www.codecguide.com/download_qt.htm.

Please see the example programs in the link below to see how these
work.
