Subject: .Reset_Session in a script

Hey all,

Sorry to be back for help so soon.

I have written a script to automatically run all of my data sets
through my program.  In my program, I define a few structures.  I
usually run the command .reset_session in between runs of my data
because IDL gets mad because my code redefines the same structure.  IDL
won't let me run the .reset_session command in my script.  Any ideas?

Thanks a lot for the help,
Branch
