Subject: Corruption of variables in PV-WAVE Advantage v5.00b
Posted by black on Fri, 11 Aug 1995 07:00:00 GMT

I;ve got a problem with corruption of variables in PV-WAVE Advantage v5.00b.

Has anyone else experienced this type of problem?

I phoned up technical support, here in the UK & they suggested using .locals

I tried this with a value of 700 and 1000 (creating 700 and 1000 local
variables repectively for those not familiar with the command). This didn't
seem to help.

If anyone else has experienced this type of problem, how did they get
around it.

Thanks in advance,

John Black.
