Hi All,

How do you replace certain (common) elements in a array without using a for loop? For e. g., I have an array:

```
a=[45,67,9999.,9999.,24]
```

and would like to replace all the 9999. with 0.00 so that a becomes

```
[45,67,0.00,0.00,24]
```

(the array is huge, so changing each element individually is not an option).

Cheers,
John
