
Subject: removing objects from a container

Hello,

David - please look out the window at your roses for a few minutes...

I can't quite figure the REMOVE method out. IDLgrROIgroup inherits from (eventually) IDL_CONTAINER so the REMOVE method is supposed to work. I don't see in the docs that IDLgrROIgroup overrides the method - but something is different.

```
IDL> group = OBJ_NEW('IDLgrROIgroup')
IDL> roi = OBJ_NEW('IDLgrROI')
IDL> group->Add, roi
IDL> group->REMOVE, /ALL
% IDLGRROIgroup::REMOVE: Incorrect number of arguments.
% Execution halted at: $MAIN$
IDL> group->IDL_CONTAINER::REMOVE,/ALL
```

Is this a bug or just a thorn?

OK, David, you can look back now.

Ben
