Subject: colormap problem in v4.0.1 (yes I read FAQ)

I have upgraded to v4.0.1 on a SunOS 4.1.3 platform and am getting the "Cannot allocate colormap entry" error. The suggestion in the FAQ to add "idl.colors: -5" to the .Xdefaults does NOT help (yes, I restarted X windows). Any suggestions?

I also note that my 4.0.1 installation no longer includes the directory "notes" which contained the sun.doc spelling out this (and other) problems.
