
Subject: idltool: Can't load Codeset...?

I have upgraded to v.4.0.1 on a SunOS 4.1.3 platform. In addition to colormap problem (see previous message) I am getting the following when starting up idltool:

Warning: Can't load Codeset file 'C', using internal fallback

Idltool then comes up looking pretty skimpy (i.e. no control panel, etc.)

I have located a file "Codeset" in my directory

/data0/idl_4/resource/X11/lib/X11/C. Can anyone please tell me what

I need to do to get this to work?

Thanks

Doug Braun
