Subject: using of hat symbol on textoidl
Posted by Nicola on Mon, 12 Jun 2006 09:57:21 GMT

Hi
I'm looking for someone who can help me in defining the symbol hat
(like in Latex \hat{}) for a string. Actually the problem I can't
solve is placing in a string a symbol above the other (I can't use !C
for other reason). Is there any way to overcome this problem? It could
be useful eventually to put it into textoidl procedures....
thank you for any suggestion
regards
Nicola
