(Unrelated, but IDLgrColorbar__define has two underscores in and IDL
will be particular about it if you accidentally name a class definition
routine with only one.)

I think you want:

```
oColorbar = OBJ_NEW("IDLgrColorbar", R_CURR, G_CURR, B_CURR,  
SHOW_AXIS=1, Title='values', HIDE=0)
```

i.e. color table values as three separate parameters instead of one long
3 * 256 element array.

Mike
