
Subject: IDL can't find procedures after changing shell

Dear all,

I am using idl licensed to my school (Fedora Linux system, IDL 6.2).
Recently I have changed my default shell from tcsh to bash, then I
found some standard IDL routines are no longer working. For example,
the procedure Identity.pro in

`/opt/rsi/idl/lib/identity.pro`

is not recognized by the idl program. Although when I expand
'<IDL_DEFAULT>' variable, I can still see the directory

`/opt/rsi/idl/lib/`

is there. The same problem applies to procedures that read netCDF
files.

This is quite confusing to me. Could any of you help me or give some
suggestions?

I will appreciate your help very much,

IDL_Newbie
